

Maestro: A Hybrid Cloud Under Your Fingertips

Maestro is your **all-in-one solution for efficient cloud and private datacenter management**. It ensures infrastructure and budgets control, security, and actionable insights on costs and performance optimization. With its user-friendly apps and customizable features, Maestro integrates seamlessly into your business. Choose from **SaaS** or **On-Premises** models and unlock the full potential of your cloud infrastructure with Maestro

KEY DIFFERENTIATORS

- **Hybrid permission model:** Maestro RBAC is applied to both the features available within Maestro and the access to the providers' native tools.
- **Unified API for cloud management:** Maestro provides unified API and unified Terraform provider for hybrid infrastructures management automation.
- **Mobile Application:** Native Mobile application provides all functionality available through web management console with push notifications.

BENEFITS

FEATURES

Single Entry Point and Unified Approach

Infrastructure management, auditing, and reporting work regardless of the cloud where the infrastructure is launched.

Interactive Analytics Dashboard

Actual data, trend analysis, and optimization points for spendings, security, and used capacities as well as a deep dive into specific values and resource details

Centralized Permission and Access Management

Apply corporate RBAC to the cloud infrastructures, both for using Maestro tools and management via providers' native consoles.

Detailed Reporting

Gather the financial, security, operational infrastructure details, costs predictions, optimization suggestions, and security finding; react to the most important reports

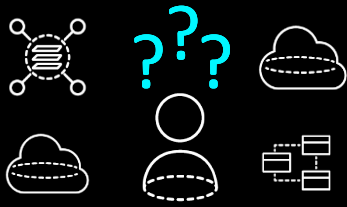

Multidimensional FinOps Controls

Set expense limits, track the expenses, react to unexpected cost peaks, and optimize the infrastructure in several clicks

Enterprise Level Security

Keep track of infrastructure compliance, vulnerabilities to attacks and security rules violations; get the remediation recommendations

CHALLENGE

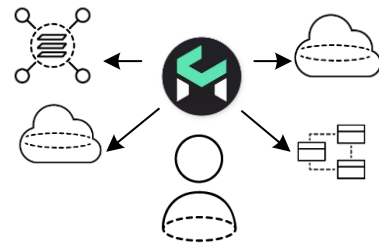

The majority of contemporary businesses depend on hybrid and -multicloud infrastructures, leveraging the optimal services provided by public cloud providers and private cloud platform vendors.

However, managing a complex distributed infrastructure requires additional effort to ensure effective organization, resource management, cloud expenditure, and security compliance.

Additionally, the need to establish collaboration between management, financial, and technical teams elevates the task of enterprise cloud management to a higher level of complexity.

SOLUTION

Maestro provides a centralized entry point to multiple clouds used by the customer (AWS, Azure, GCP, private), and gives unified controls over the infrastructures.

It has tools and capabilities that allow to:

- Organize secure access and role-based permissions
- Plan, control and reduce costs
- Track and improve security and compliance of the infrastructure
- Optimize infrastructure in terms of performance, cost and security
- Remediate detected issues and vulnerabilities
- Automate infrastructure management with IaC tools and SDK/API
- Create customer-focusing service catalog for quick deployment of the necessary solutions to Cloud
- Keep track of the changes and updates in infrastructure due to letters, notifications, integration with Teams and push notifications on mobile devices

PURCHASE OPTIONS

POC

Get a 3-months long hands-on experience and guidance by our assistance team to estimate the value Maestro can bring to your business

FREE

- Platform and infrastructures discussed individually
- Free setup and usage guidance
- POC effectiveness assessment

BASIC

For the enterprises that have evolving infrastructures

\$30-150/year per VM

- Contract agreed on a number of expected Annual VMs and reviewed on the quarterly basis
- Annual VM Count: 0-299 - \$150
- Annual VM Count: 300-699 - \$125

YEARLY PRO

For large enterprises with stable workloads. Annual upfront fee and usage-based review

\$30-40/year per VM

- Annual upfront fee, based on mutual assessment and an agreed average resource usage level
- Annual VM Count: 10000-19999 - \$40
- Annual VM Count: 20000+ - \$30
